                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           TISSUE SPECIFICITY: Highly expressed in spleen and testis; detected at lower levels in lung and thymus. DISEASE: Defects in Thirsf13c are a cause of severe B-cell deficiency. B-cell deficient strain A/WySnJ has a 4.7 kb in in the BAFFR gene leading to an altered C-terminus. The mut is not detectable. B-cell lymphopoiesis is normal, but the span of peripheral B-cells is much reduced. SIMILARITY: Contains 1 TNFR-Cys repeat.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Promotes the survival of mature B-cells and the E SUBCELLULAR LOCATION: Membrane; single-pass type

SIMILARITY: Belongs to the peptidase S8 family. Furin subfamily
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ome Biol. 3:RESEARCH0080.1-RESEARCH0080.8(2002).
FUNCTION: Furin is likely to represent the ubiquitous endoprotease activity within constitutive secretory pathways and capable of cleavage at the RX(K/R)R consensus motif (By similarity).
CATALYTIC ACTIVITY: Release of mature proteins from their proproteins by cleavage of -Arg-Xaa-Yaa-Arg-|-Zaa-bonds, where Xaa-Gan be any amino acid and Yaa is Arg or Lys. Releases albumin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Name=D; Synonyms=E;

      SIGNAINT: Probably forms covalent oligomers.
SUBUNIT: Probably forms covalent oligomers.
SUBCELLUAR LOCATION: Type I membrane protein, exclusively on tapical region of the sperm head (By similarity).
TISSUE SPECIFICITY: In testis, primarily in haploid spermatids.
Not in lung, liver, heart, spleen, brain, kidney, epididymis.
DOMAIN: The MAM domains probably mediate sperm adhesion to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CAUTION: The sequence shown here is derived EMBL/GenBank/DDBJ whole genome shotgun (WGS)
